# Build gallery

## What the Build produces, running

Eight short films, twelve working demos, the catalogue of what we build and the products we have shipped: everything the Build can produce, each one tailored to the company that needed it.

Every brand, name and figure in the films and demos is a stand-in. Your build carries your brand.

Eight films | Twelve interactive demos | Thirty-six kinds of build

Nothing here is real client data

## Eight things we build, in 40 seconds each

**Each film shows one kind of system from the problem to the working screen. Press play; the sound is on.**

### Social media engine

One idea in, a month of content out, in your brand voice, on every channel you use.

- ✓ Writes the copy, designs the graphics, cuts the video and records the voiceover
- ✓ Schedules across every channel from one calendar
- ✓ Replies drafted as comments arrive; you tap approve
- ✓ Results feed the next week's plan

## Digital hiring and matching

Every candidate on file graded against every open role each morning, with the first approach drafted.

- ✓ Short applications with an on-camera answer
- ✓ Scored and sorted before anyone opens a file
- ✓ Matches found in the candidates you already have
- ✓ A first message drafted for the consultant to send

## Client portal

Your clients sign, upload, see their progress and pay behind one private link, in your brand.

- ✓ Contracts and undertakings signed in the browser
- ✓ A living plan of the work with every stage priced
- ✓ Forms that shape the job, filled once
- ✓ Payments by card or transfer, one tap

## One system

Quotes, jobs, rosters, invoices and reporting in one place, with data entered once and carried everywhere.

- ✓ Quote to invoice without re-keying
- ✓ Rosters built from the jobs, not by hand
- ✓ Reporting that assembles itself at month end
- ✓ Every tool you keep connected to the one you add

## AI agent and automation

An assistant that checks the calendar and the inbox, drafts the reply and waits for your approval.

- ✓ From enquiry to booked call without anyone touching it
- ✓ Drafts ready for a person to check and send
- ✓ A run log that shows exactly what happened
- ✓ Nothing goes out without a human in the loop

### Documents, forms and e-signature

Fill a few fields, watch the letter assemble itself, send it, and see it signed and filed.

- ✓ Templates that know your terms and your tone
- ✓ Signed in the browser, no printing
- ✓ Dates and obligations pulled out and queued as reminders
- ✓ Every version filed where the matter lives

### Matters, time and money

Budget against work in progress on every matter, time captured as the work happens, invoices drafted from it.

- ✓ Time captured from the work, not from memory
- ✓ Budget and work in progress on one screen
- ✓ Invoices drafted at the end of the month, ready to check
- ✓ Lodgements and deadlines on one calendar

### Operations by chat

Run the warehouse, the roster or the day's deliveries from a chat window your team already uses.

- ✓ Ask what is due today and get the list
- ✓ Book, move and confirm in plain language
- ✓ Works on the phone in the yard, not only at a desk
- ✓ Every answer backed by the live system

---

## Twelve demos, as screens

**A still from each of the interactive demos. Open the demos beneath to click through any of them.**

## Twelve working demos

## What we build, A to Z

**The kinds of software and automation the Build produces. Each one starts from a constraint the Audit measured, and ends as a working screen your team uses.**

## Shipped

**Products of ours that are live today, shown as working screens.**

## Closer to your own business

Want to see one running on real data, or something closer to your own business? Ask for a live walkthrough on the 20-minute call. What we do and how we work is in the capability statement.
